PU SOFT TOUCH POURED RESIN FLOORS

touchstone PU soft touch floors utilise the latest flooring technologies to produce a seam-free, elastic, hard-wearing surface perfect for domestic use. At *touchstone floors ltd* we are also able to provide a totally UV stable satin matt finish. Warm to the touch, permanently bonded and with increased sound proofing *touchstone PU soft touch floors* offer an ideal alternative to traditional hard flooring materials. *touchstone PU soft touch floors* are available

in a wide range of colours and colour combinations. This attractive, customisable flooring can be fitted anywhere around the home, and is ideally suited to kitchens, bathrooms and conservatories.

Unlike other Polyurethane self-smoothers (sl's), our coatings use totally UV resistant polyurethane resins with carefully selected pigments. This means any colour can be specified with little or no UV degradation. All other poured resin floors made from epoxys or aromatic polyurethanes suffer from quite severe UV discolouration and degradation within a short period. Only UV resistant topcoats serve as a barrier with other inferior systems, which are effective until worn off. For further information or to request a sample, please contact our sales representatives.
