EXTERNAL BOUND SYSTEMS & STONE CARPETS

Touchstone manufacture and supply, using the latest technology, a seam-free, elastic and hard-wearing surface suitable for external applications.

UV stable natural and coloured aggregates are available in a wide range of colours and combinations. **Touchstone** Stone Carpet is available with both UV and non-UV stable binding resins. They require effective surface preparation and priming to achieve good adhesion. This means any colour can be specified with little or no UV degradation.

This product can be used unsealed for *swimming pools, walkways, garden paths, patios* and more,

UV Resistant Polyurethane

A two component binding resin suitable for external bound resin systems and stone carpets. It can also be used internally with lighter aggregates, when strong UV is present. This binder makes a strong screed which still retains a degree of flexibility.

Non-UV Resistant Polyurethane

A two component binding resin which is a very effective solution for larger areas and/or where colour stability is not an issue. As some discoloration may occur, this product is best suited to darker aggregates. This does not affect its performance otherwise for outside use.
