PU 'HARD-WEAR' POURED RESIN FLOORS

touchstone PU industrial 'hard-wear' self-smoothing floors utilise the latest flooring technologies to produce a seam-free, elastic, hard-wearing surface perfect for use in industrial settings. Permanently bonded and with increased sound proofing *touchstone PU floors* offer an ideal alternative to traditional epoxy industrial flooring. *touchstone PU* Poured Resin floors are available in a wide range of colours and colour combinations. As with all PU self-smoothing floors of this kind, this material is not UV resistant and requires effective surface preparation and priming to achieve good adhesion.

touchstone's PU hard-wear floors:

- Colder temperatures have less influence on the flow of PU material than on epoxy self-smoothers.
- Although very hard, *touchstone PU* coatings remain flexible, reducing the possibility of cracks appearing in the substrate (Hardness: Shore 60).
- Good flow characteristics; no spike rolling required
- Slopes of up to 1cm in a metre can be easily accommodated.
- A UV filter, either satin or matt, is part of the system.
- Masking tape is easily removed to form a perfect edge.
- UV resistant PU systems are also available on request.
